

CESM 2.1.5 with emissions and interactive fire and biogenic aerosols for investigating baseline, mitigation, and climate intervention scenarios

June 12 2024

CESM Framework for Impact Assessment and Management

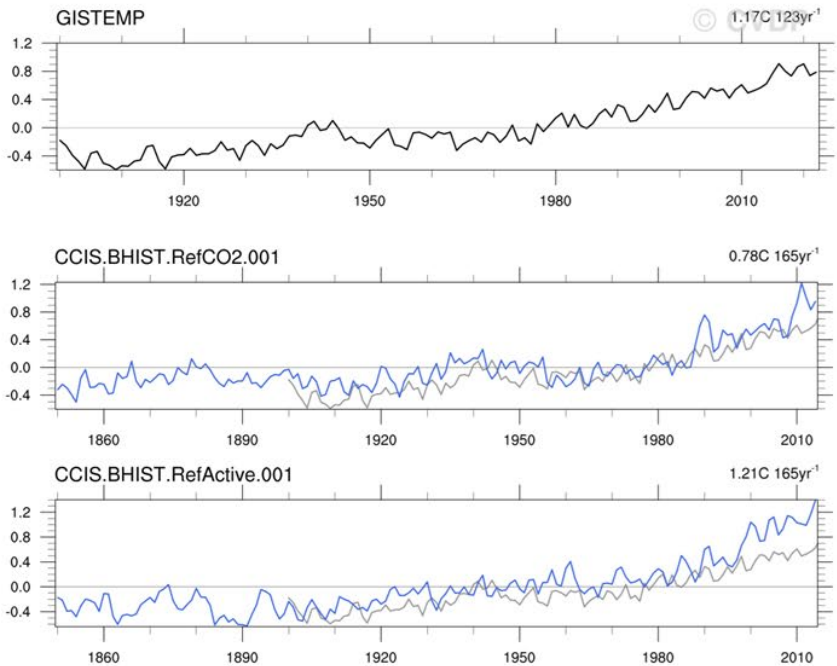

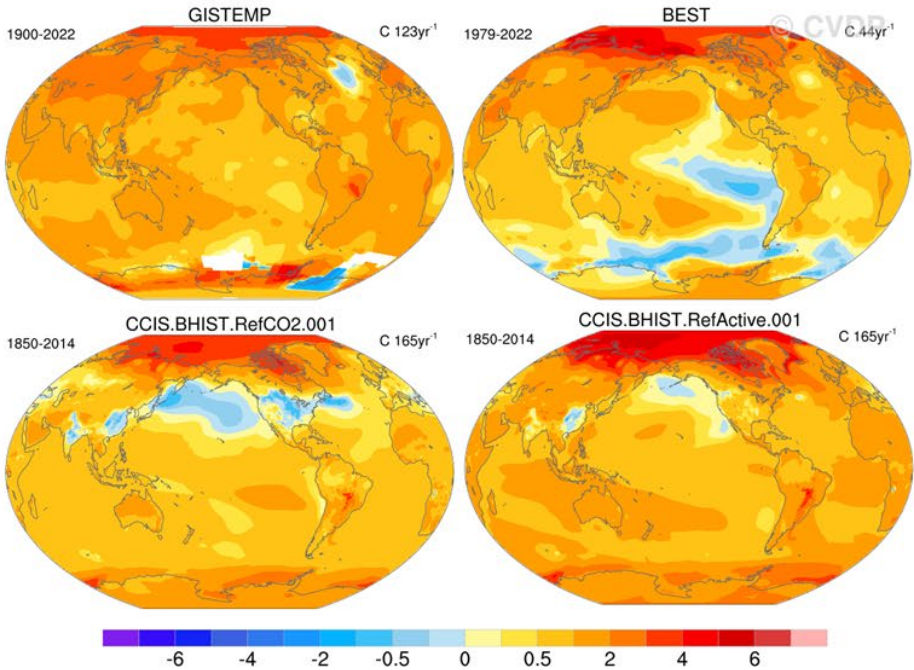

Community Climate Intervention Strategies Ensemble (CCIS Ens):

- CESM 2.1.5 (LENS2 Science) CO₂ and Aerosols dynamically modeled.
- CMIP6 Fossil Fuel CO₂, Methane, and Aerosol Emissions
- Historical, SSP 1-1.9, SSP 2-4.5 and SSP 3-7.0.
- Active Fire Aerosol Emissions
- Active Biogenic Volatile Organic Compound (BVOC) Emissions
- Marine Coccolithophores in New Ocean BGC – FEISTY Fish Model
- **Atmosphere SRM:** Stratospheric Aerosol Injection (SAI) -- Marine Cloud Brightening (MCB)
- **Land CDR:** Re/Afforestation -- Bio Energy and Carbon Capture and Storage (BECCS) -- Direct Air Capture (DAC with CCS)
- **Ocean CDR:** Enhanced Alkalinity -- Macroalgae (Kelp) with Biomass Sinking -- Electrochemical CO₂ removal from sea water

CESM Framework Historical Surface Temperature Evaluation

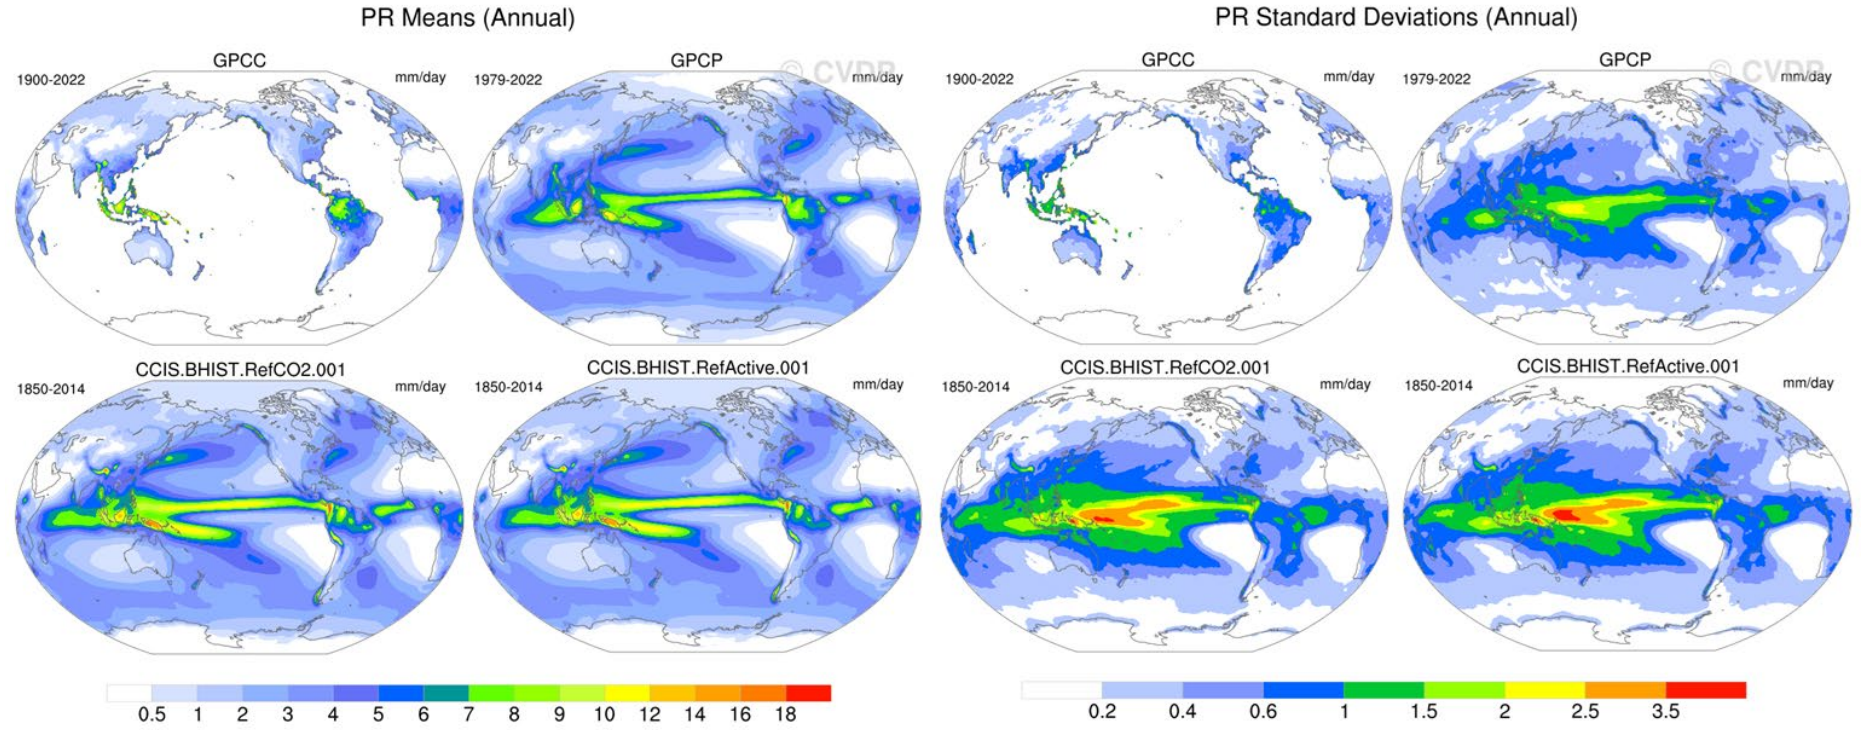

Evaluating CCIS Ensemble Historical Temperature
Prescribed vs Active CO2 and Aerosols

TAS Trends (Annual)

CESM Framework Precipitation Evaluation

Evaluating CCIS Ensemble Historical Precipitation -- Prescribed vs Active CO2 and Aerosols

CESM Framework Historical Active Aerosol Evaluation

Evaluating CCIS Ensemble Historical Fire and BVOC Aerosol Burdens – Prescribed vs Active CO2 and Aerosols. Active Emission Factors Tuned for Fire and MEGAN to target CMIP6 values

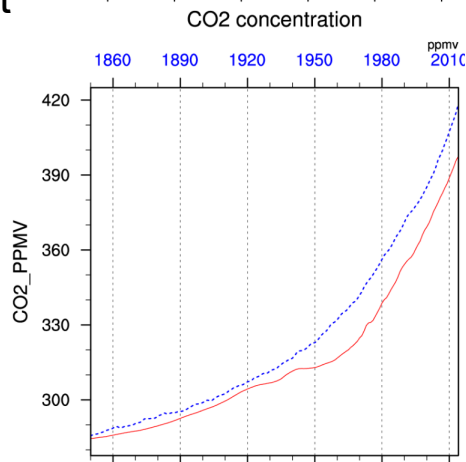

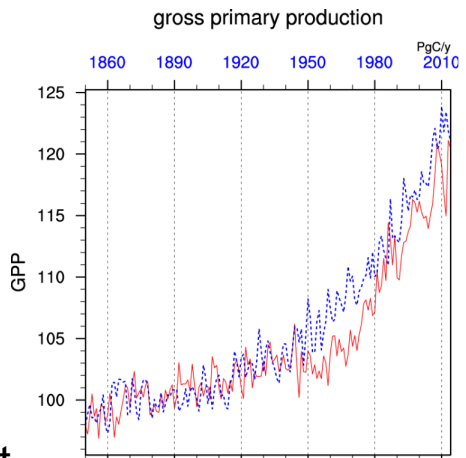

CESM Framework and Global Carbon Cycle

Evaluating CCIS Ensemble Historical Carbon Cycle – Prescribed vs Active CO2 and Aerosols compared to the Global Carbon Project (2022)

Evaluating CCIS Ensemble Historical Carbon Cycle – Prescribed vs Active CO2 and Aerosols compared to the Global Carbon Project (2022)

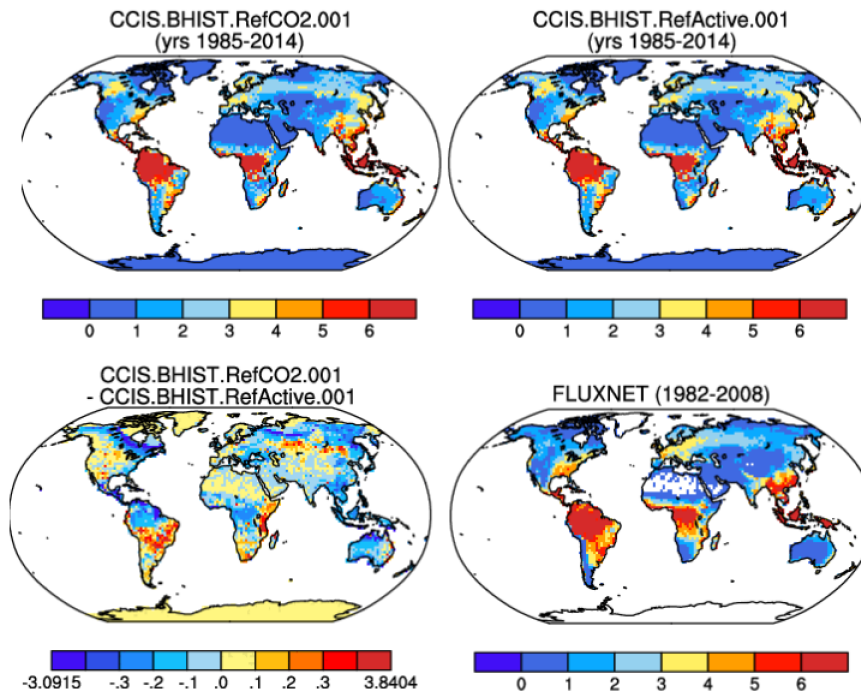

* Note Colors are swapped from previous plots

CCIS.BHIST.RefActive.001 (yrs 1985-2014)

CCIS.BHIST.RefCO2.001 (yrs 1985-2014)

ANN GPP (gC/m²/d)

Research Accomplishments: ESM Framework and Toolkit

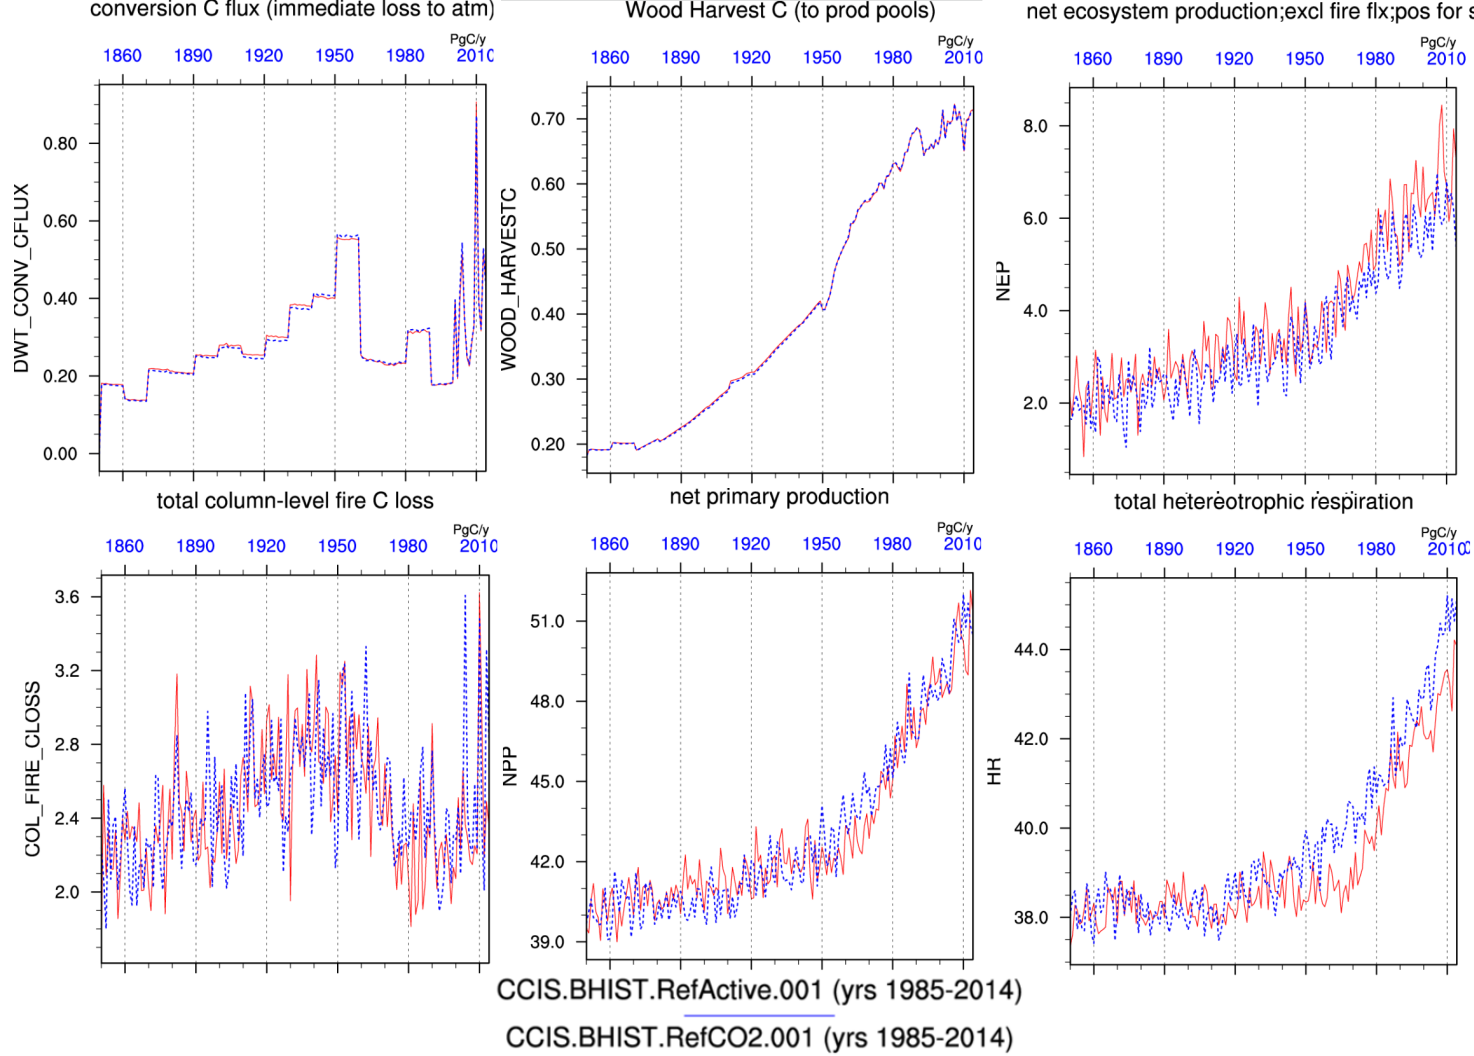

Evaluating CCIS Ensemble Historical -- Prescribed vs Active CO2 and Aerosols

CCIS.BHIST.RefActive.001 (yrs 1985-2014)
 CCIS.BHIST.RefCO2.001 (yrs 1985-2014)

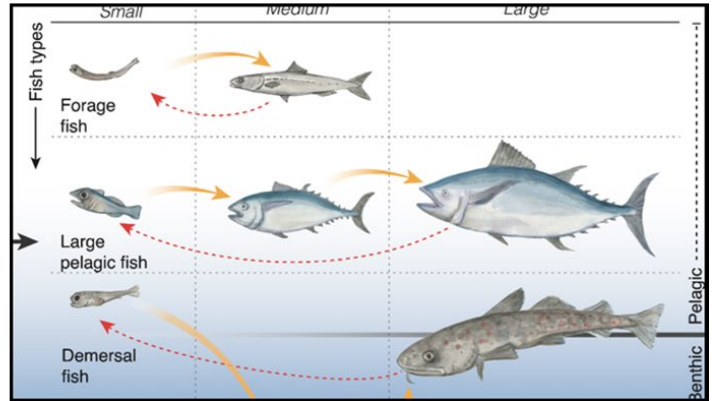

* Note Colors are swapped from previous plots

Evaluating CCIS Ensemble Historical Carbon Cycle – Prescribed vs Active CO2 and Aerosols compared to the Global Carbon Project (2022)

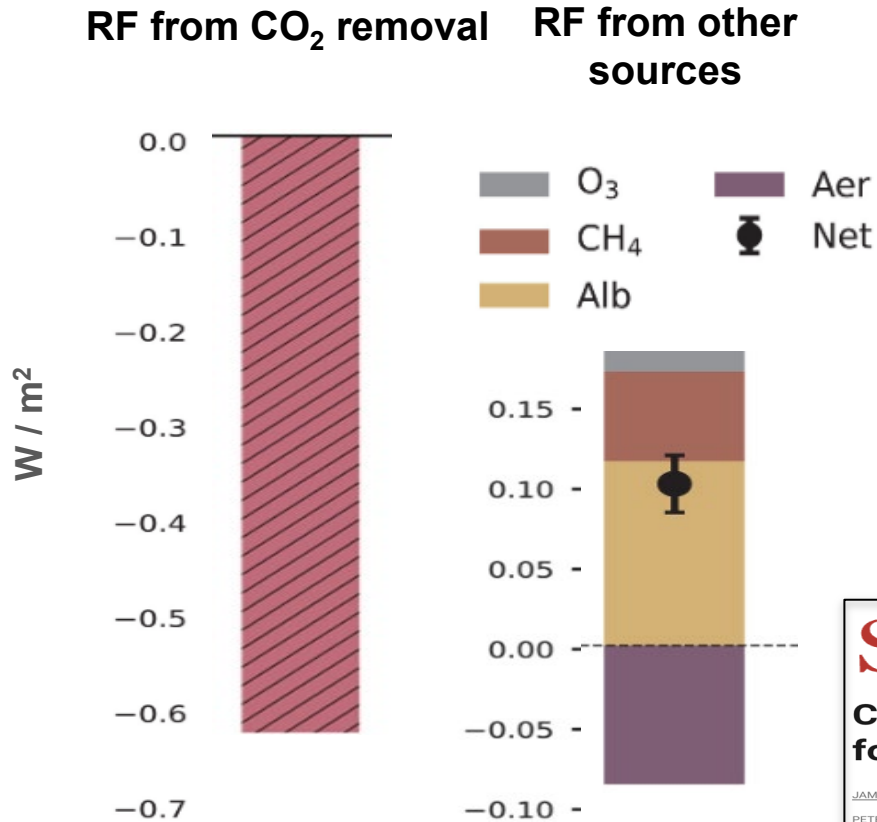

Research Accomplishments: CESM Embedded Impacts

- Agricultural Yield (CLM Crop)
- Fisheries Modeling (MARBL > FEISTY)
- Urban Climate (CLM Urban) and Human Health
- Wildland and Crop Fires
- Water Availability and Irrigation Demand
- Wood Production
- Ecosystem Health

Earth System response to reforestation is complex

Full understanding of impacts of reforestation requires **ESM**

In CESM2 experiments, the direct radiative forcing (RF) from CO₂ removal is offset by changes in albedo and BVOC emissions and their impact on ozone, methane, and aerosol burdens

Science

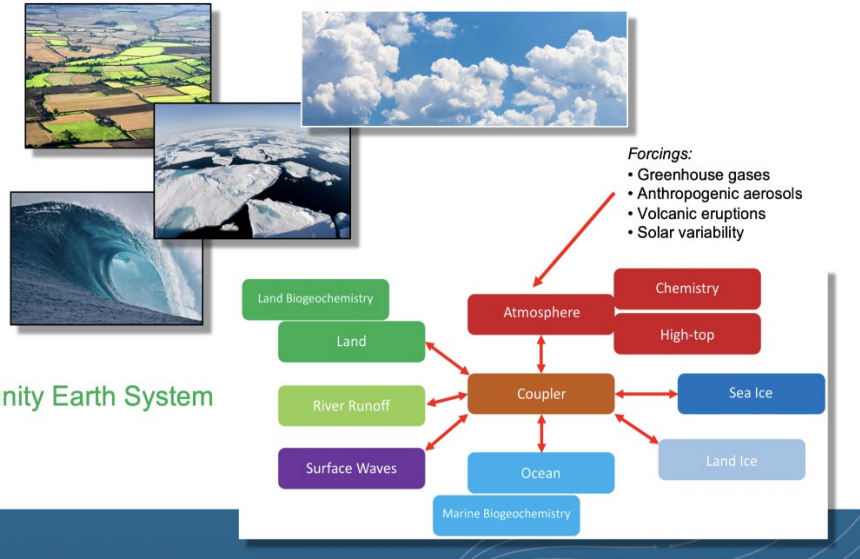

Chemistry-albedo feedbacks offset up to a third of forestation's CO₂ removal benefits

JAMES WEBER , JAMES A. KING , NATHAN LUKE ABRAHAM , DANIEL P. GROSVENOR , CHRISTOPHER J. SMITH , YOUNGSUB MATTHEW SHIN , PETER LAWRENCE , STEPHANIE ROE , DAVID J. BEERLING , AND MARIA VAL-MARTIN  [Authors Info & Affiliations](#)

Modeling Tools for SAI and MCB Projections

State of the Art Earth System Models are required to simulate the full impact of Stratospheric Aerosol Intervention and Marine Cloud Brightening Approaches (WACCM)

- Complex process in both troposphere and stratosphere are needed, aerosol microphysics, cloud-aerosol and chemistry
- Coupling for land and ocean carbon cycle, sea-ice model, land model
- Modeling across scales: actional science application to address water, food, and health
- Evaluation: observational lab and field experiments, and observing system, satellites (for ship tracks, volcanic eruptions, etc)

Volcanoes

Ship Tracks

Stratospheric Aerosol Intervention Scenarios

Global mean surface temperature

Assessing Responses and Impacts of Solar climate intervention on the Earth system (**ARISE**) SAI and MBC (Richter et al., 2022): 10-member ensemble using CESM2(WACCM6)

- Start: 2035
- Goal: Keep surface temperature at 1.5C above Pre-Industrial Conditions
- Extension of the ARISE dataset from 2070 -2100 conditions
- Used as maximum plausible SAI scenario
- Results are used for combined CDR / SAI studies in the next phase of the project

A low-angle photograph of a dense tropical forest. The image shows several large tree trunks and thick, moss-covered roots reaching upwards. Sunlight filters through the dense canopy of green leaves, creating a bright, dappled light effect. The overall scene is lush and vibrant, capturing the height and complexity of a rainforest.

Thank you – Questions?
