

Recent ADF developments

and collaboration with CUPiD

Jesse Nusbaumer,
Software Engineer, NCAR/CGD

June 11, 2024

Credits

Lead roles

- Justin Richling
- Dani Coleman
- Brian Medeiros

Supporting cast

- Rebecca Buchholz
- Julie Caron
- Will Chapman
- Andrew Gettelman
- Cecile Hannay
- Shawn Honomichi
- Teagan King
- Mike Levy
- Dan Marsh
- Lev Romashkov
- Isla Simpson
- Ben Stephens
- Adam Phillips
- Feng Zhu

Background (AMWG diagnostics)

f.e21.FWscHIST.ne30_L48_BL10_cam6_3_035.tphysac_reorder_zm2_clubb-exp2.001.hf2
 and
 OBS data ([info](#))

Set Description

- 1 [Tables](#) of ANN, DJF, JJA, global and regional means and RMSE.
- 2 [Line plots](#) of annual implied northward transports.
- 3 [Line plots](#) of DJF, JJA and ANN zonal means
- 4 Vertical [contour plots](#) of DJF, JJA and ANN zonal means
- 4a Vertical (XZ) [contour plots](#) of DJF, JJA and ANN meridional means
- 5 Horizontal [contour plots](#) of DJF, JJA and ANN means
- 6 Horizontal [vector plots](#) of DJF, JJA and ANN means
- 7 Polar [contour and vector plots](#) of DJF, JJA and ANN means
- 8 Annual cycle [contour plots](#) of zonal means
- 9 Horizontal [contour plots](#) of DJF-JJA differences
- 10 Annual cycle [line plots](#) of global means
- 11 Pacific annual cycle, Scatter plot [plots](#)
- 12 Vertical profile [plots](#) from 17 selected stations
- 13 Cloud simulators [plots](#)
- 14 Taylor Diagram [plots](#)
- 15 Annual Cycle at Select Stations [plots](#)
- 16 Budget Terms at Select Stations [plots](#)

WAWG Set Description

- 1 [Tables](#) of regional min, max, means
- 2 Seasonal cycle [line plots](#) of SP, SM, EQ, NM, NP zonal means (vertical log scale)
- 3 Vertical [season cycle plots](#) of SP, SM, EQ, NM, NP zonal means (vertical log scale)
- 4 Vertical [contour plots](#) of JUN, DEC, DJF, MAM, JJA, SON and ANN zonal means (vertical log scale)

A collection of NCL scripts wrapped in a (C-)Shell Script. In other words unsustainable legacy code.

Also an incredible success, was used by scientists for over 20 years.

So we needed a replacement.

Special

The AMWG Diagnostics Framework (ADF) is a Python-based replacement for the original diagnostics, including an attempt to use widely-supported tools (e.g. xarray) and more modern software practices (e.g. OOP).

ADF Intro

VARIABLE	UNIT	CASE	BASILINE	DIFF
RESTOM	--	-0.243	0.198	-0.441
FLNT	W/m2	241.478	241.877	-0.399
FLNTC	W/m2	264.464	264.355	0.109

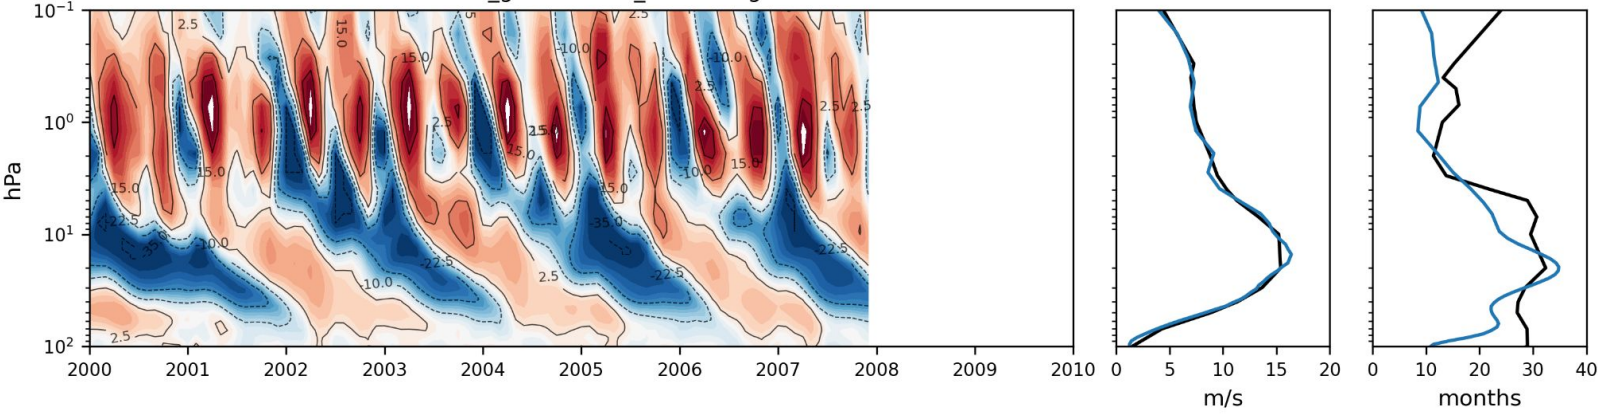

Examples of standard output from the ADF

New ADF features

High-top CAM/WACCM plots

QBO

```

How to call: PR in revision that adds controls to ADF yaml
file, ability to make timeseries from a list of history files

diag_cam_climo:
  hist_str: [cam.h2,cam.h0]
diag_mdtf_info:
  mdtf_run: True
  pod_list : [ "MJO_suite" ]
  
```

Coupling with CUPiD

Current Status

- Example ADF Notebook implemented in CUPiD
- Time Series functionality pulled out into core CUPiD code so all components can use it (or so that it can be easily replaced with a better system).

Future Efforts

- Run ADF as a script instead of as a notebook (which should provide CUPiD full ADF functionality).
- Pull out additional ADF-internal routines (e.g. climatology generation) to make them available CUPiD-wide.

ADF Diagnostics In Jupyter

This notebook will run the Atmospheric Diagnostic Fram

Note that it was developed to run on Cheyenne/Caspar

Setup

Required packages

```
In [ ]: import os.path
        from pathlib import Path
        import sys
```

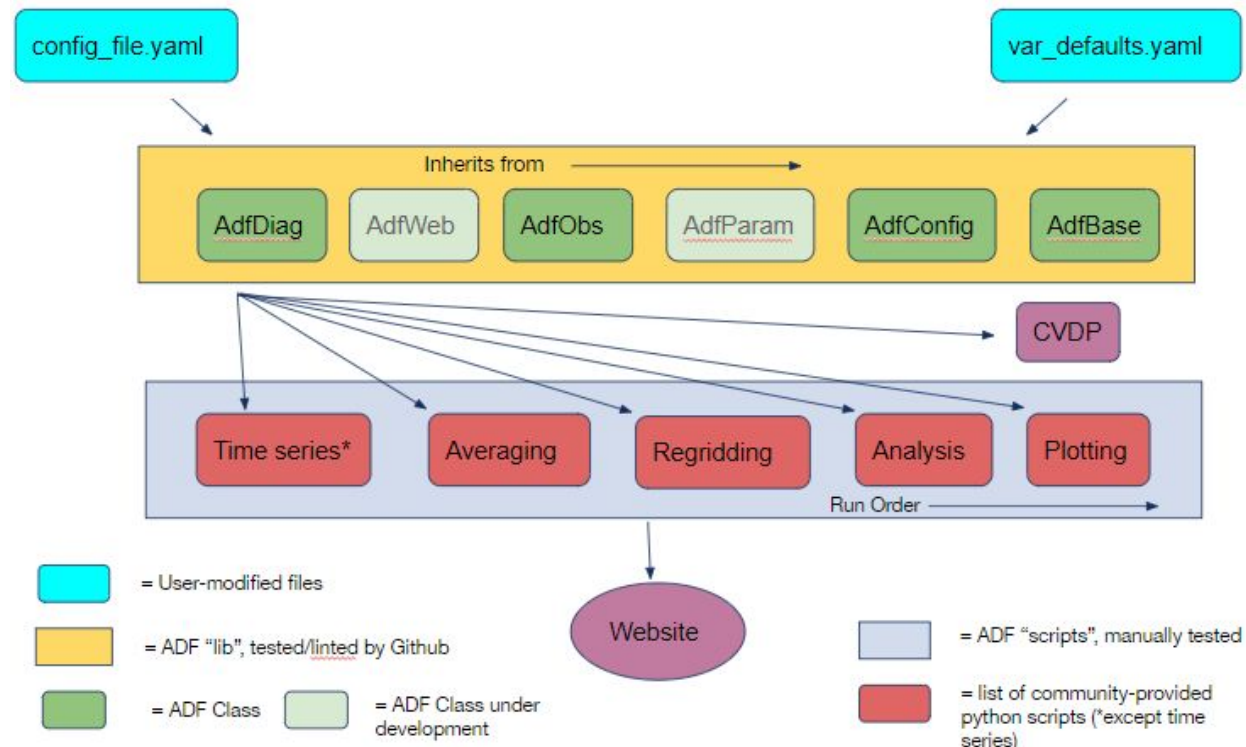

```
1 """
2 Timeseries generation tool adapted from ADF for general CUPiD use.
3 """
4 # ++++++
5 # Import standard python modules
6 # ++++++
7 from __future__ import annotations
8
9 import glob
10 import multiprocessing as mp
11 import os
12 import subprocess
13 from pathlib import Path
14
15 import xarray as xr
```

Future Design plans

- Reduce amount of class inheritance (instead make more independent classes that use each other).
- Implement more dask (distributed parallel computing) functionality
- Implement more automated unit testing

CUPiD-ADF

- Allow ADF to be configured via python dictionary (so CUPiD can control high-level configuration).
- Allow ADF to use provided computing/dask environment.

Final Thoughts

Final Thoughts

- CUPiD, ADF, or any new diagnostics system, needs more than a small FTE contribution in order to fully succeed, especially as it gets more mature (and complex).

Final Thoughts

- CUPiD, ADF, or any new diagnostics system, needs more than a small FTE contribution in order to fully succeed, especially as it gets more mature (and complex).
- Hackathons and Interns will not save the day.

Final Thoughts

- CUPiD, ADF, or any new diagnostics system, needs more than a small FTE contribution in order to fully succeed, especially as it gets more mature (and complex).
- Hackathons and Interns will not save the day.
- It is still unclear to me where to draw the line between what should be in a diagnostics package and what should just stay with a particular scientist/journal article.

Final Thoughts

- CUPiD, ADF, or any new diagnostics system, needs more than a small FTE contribution in order to fully succeed, especially as it gets more mature (and complex).
- Hackathons and Interns will not save the day.
- It is still unclear to me where to draw the line between what should be in a diagnostics package and what should just stay with a particular scientist/journal article.
- High resolution is going to just mess all our stuff up.

Thanks for listening!
Any Questions?
